9000 Tablet Arm Chair Desk with Book Basket Product Specification

FRAME: Integrated back/seat/leg design provides classic look and maximum strength. Frame is formed of two parallel 1" 18 gauge tubes that are welded together underneath the seat. U-shaped back is carefully contoured to the plastic to ensure maximum screw engagement and strength. CDF uses a process which maintains the tubes under compression for superior durability. Slight extension of rear legs provides a "wall saver" feature. Large Melsur™ (14" x19" x 26") solid plastic tablet top is supported by a one inch tube welded to the front edge of the frame and a 1" diameter brace welded to the chair.

SEAT and BACK: The frame is contoured to fit the shape of the 5/8" Melsur™* solid seat. Melsur plastic is stain/wear resistant and self-extinguishing. The seats and backs are attached with steel rivets underneath the plastic resulting in no exposed hardware on the surface. The Melsur™ seat has a waterfall edge to improve seating comfort.

BOOKRACK: "13 x 17" bookrack is made with ½" diameter solid steel side rails and 5/16" wire cross members welded together and to the chair using gas shield metal arc welding. A solid 1/2" steel rod extends across the back legs in an inverted "V" to help contain books and discourage use as a foot rest.

METAL FINISH: Bright nickel chrome plating meets all present requirements for non-corrosive and abrasion resistant finishes.

GLIDES: High shoulder nylon glides with an internal gripper spring. Glides are 1 ¼" diameter and a 40 degree full-swivel with a ½" shoulder. Metal glides are optional.

HEIGHTS: 15 ½", 17 ½".

* World's leading manufacturer of solid plastic desktops and seats.

Made in the USA
